Product lifecycle management

GE HealthCare

Address complex challenges in clinical asset management

A need for rapid consolidation¹

Organizations with thousands of devices under management need to convert to uniform management in a short time frame.

Frequent use of machines

More than 80% of all hospital and health system visits include at least one imaging exam per patient² leaving little space for the downtime necessary to install new machines.

Need to extend lifecycles

Some facilities are holding onto MRI and PET systems two or three years longer³ due to increased budgeting constraints.

Providers need innovative approaches to optimize existing technology assets for today's patient care and workflow demands.

Consult with GE HealthCare experts for assistance in planning for long-term asset efficiency and sustainability.

A partnership for comprehensive product lifecycle management

Built around your clinical and operational needs

- Current equipment utilization
- Individual asset functionality and maintenance requirements
- Cybersecurity capabilities
- Workforce constraints and department workflow needs
- Long-term budget planning
- Growth plans and future capacity projections

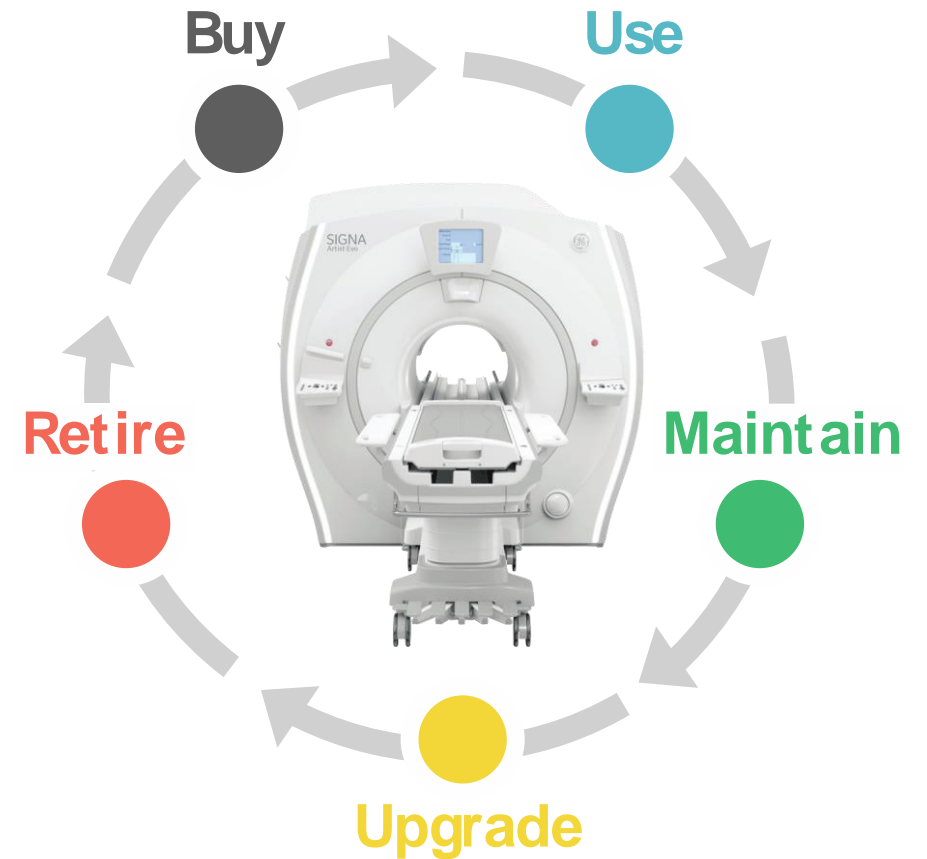

Scalable solutions to optimize medical imaging

- Upgrading existing equipment
- Asset procurement
- Financing
- Maintenance and repairs
- Clinical asset management to accommodate both small and large fleets
- Commissioning and decommissioning assets
- Staff training

Centralizing lifecycle management for sustainable advantages

Count on GE HealthCare's insight and support to help you:

- Achieve economies of scale
- Optimize asset performance
- Improve predictability
- Minimize maintenance and downtime
- Maintain security across your fleet
- Improve predictability and stabilization of capital, operational, and cash flow structures

Collaborate with GE HealthCare to help elevate care delivery, operational productivity, and financial outlooks.
